MV-1 User Fee Payment Means of Collection

The MV-1 allows payment by means of \$1, \$2, \$5, \$10, \$20, \$50, \$100, or other increments. Change can also be limited for any and all user fee transactions. This unique feature allows you to discriminate between high and low dollar purchases. For example, you may wish to allow a larger denomination bill to be accepted, with higher change allowed for purchase of annual permits or multiple purchases of differing use fee activities. The MV-1 allows multiple selections under one transaction, eliminating the need to re-enter like information or swipe your credit card numerous times. Payment can also be made by \$.05, \$.10, \$.25, \$1.00 coin or token (token custom), credit/debit card, as approved by your Park's head office.

A Smart Card Reader is already incorporated into the MV-1 Terminal, expanding future payment capabilities. The Smart Card can also be used to replace existing Park's cards, such as GA/A, Eagle, or others which provide similar discounts. Replacing the older style cards (paper cards) with smart cards creates a more controlled and enforceable environment. Each individual Smart Card can be tied to a specific user, utilizing the existing card number and the Park's specific secret coding system which identifies the new Smart Card as being an authorized Park's card. A system for validating and enforcing said discounts at the terminal would then be established with relatively low cost.

Vouchers are also produced by the Terminal, and can be set to dispense in low or out-of-change situations. The vouchers can then be used at the same terminal as cash, through the bar code reader at a later date, or for refund purposes at your Ranger Station Headquarters.

MV-1 "Parks & Recreation" Software

The MV-1 Software architecture is set for growth, and to allow for future upgrades to the program without effecting individual park rates and fee structures. Over the coming years or months, as MITI adds additional features to the software package, the later versions of the operating software will overlay the older versions and add new features without the need to re-enter data or fee information.

In addition, MITI's software easily changes all on-screen wording and voice messaging to suit specific needs. English and Spanish are already programmed into the unit. Multiple languages may be added. MITI will provide assistance in making these changes, and or make them for you at a nominal cost. All functions can be enabled or disabled.

Reports for collections can be pulled up by date, period or type (PWE), and in any combination. Maintenance and terminal door and component access reports can be accessed readily by modem connection, by on-screen viewing at the terminal, or by direct link with a handheld at the unit. They can be downloaded and printed on your host (office) computer's printer. Access is restricted to Management, Ranger, Host or Maintenance Personnel by means of Smart Card with pin number at the terminal, or access codes for remote communication. (SEE ACCOMPANYING DETAILED SPECIFICATIONS)
